

Simple plane

Difficulty :

Pieces :

~25

Age :

+4

Duration :

~15 min

1

Lay 3 planks flat, end to end: that's the fuselage, the body of the plane. Then add one Kapla on each side, well clear of it: those are the engines, and the wings will lean on them later.

2

Lay another course of 3 planks on top of the first, but shift it slightly forward. Stack a second Kapla on each engine too.

3

Add two more courses, still 3 Kapla each: the third moves forward a tiny bit more, and the last one comes back to sit right above the first. The nose — the front of the plane — takes shape as a staircase.

4

Lay 3 planks on each side, on a slope: the top rests on the back of the fuselage, and the bottom runs down to the table, passing over its engine.

5

At the back, lay one plank across the fuselage, then a second on top of the first: that's the tailplane, the part that helps the plane fly straight.

6

To finish, lay one last Kapla along the axis of the plane, on top of the tailplane: that's the fin, the part that stops it from turning on its own. Your plane is ready for take-off!

BRAVO!
