

Scales

Difficulty :

Pieces :

~20

Age :

+4

Duration :

~10 min

1

Lay two planks flat, end to end and lined up. This is the base, the wide foot that keeps the scales from tipping.

2

In the middle of the base, lay four Kapla in two touching columns, running up your drawing. This is the post of the scales.

3

At the top of the post, lay two rows of four planks end to end. This is the beam, the long bar that carries both pans.

4

Under one end of the beam, draw a triangle: two sloping planks meeting at the top and one flat underneath. This is the pan, where you put what you weigh.

5

Make the same triangle under the other end of the beam. Both sides match: your scales are balanced!

BRAVO!
